

studex.

the college portal indian students actually
open.

3.52Cr

3.52 Cr

undergraduate students in India with zero tools built for them

88.3%

use WhatsApp as primary source of academic information

₹0

market cap of the daily student experience layer. today.

THREE THINGS THAT MAKE EVERY COLLEGE MORNING HARDER THAN IT NEEDS TO BE.

every. single. day.

01 — MORNING

no one knows their schedule.

timetable was shared as a PDF in a WhatsApp group three months ago. it's buried under 4,000 messages. so you text a friend. every morning.

88.3%

students use WhatsApp for academics · 2024 survey

02 — FILES

200 files. one WhatsApp group.

CRs dump notes, assignments, circulars, everything in one thread. exam week. you need the Unit 3 PDF. good luck finding it.

57%

find WhatsApp academic groups time-consuming and distracting

03 — ATTENDANCE

the 75% rule. tracked on gut feel.

portals exist. nobody opens them — slow, broken on mobile, always outdated. students don't know if they can bunk tomorrow. anxiety every day.

75%

mandatory attendance rule enforced across Indian colleges. no exceptions.

every existing tool was built for the wrong person.

Classplus	→	built for tutors (₹29,999/yr B2B)
Google Classroom	→	built for institutions, top-down only
College portals	→	built by admins. no student was consulted.
My Study Life	→	3.6 stars. data loss. intrusive ads.
WhatsApp	→	built for everyone. works for no one academically.

studex is the first tool built entirely for the student. self-serve. pull-based. behavior-first. no admin setup. no hierarchy.

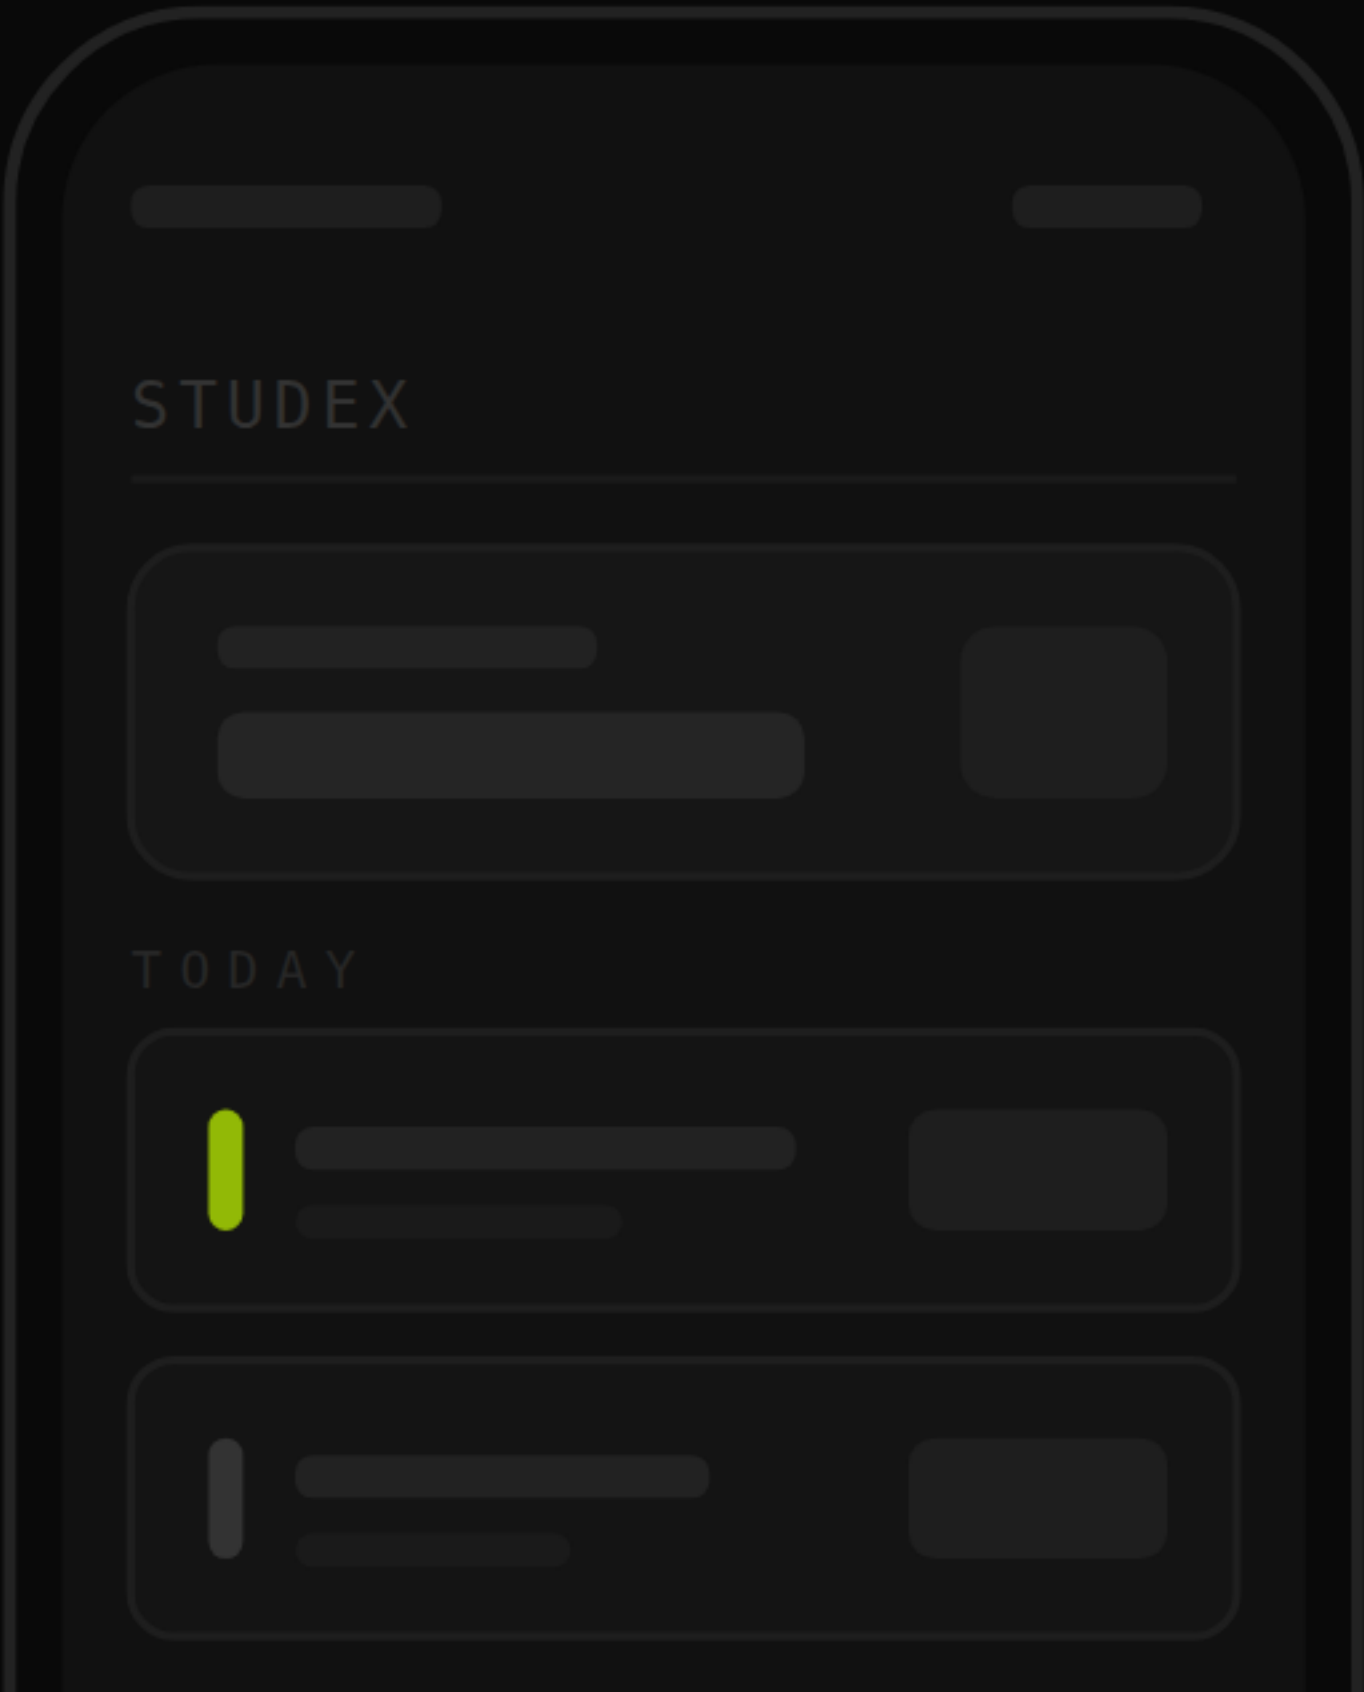

- NO ADMIN
- NO HIERARCHY
- SELF-SERVE

student first.

no existing app owns this position.
everyone is serving the institution.
studex serves the student.

one app. three fixes.

sign up. upload your timetable. done. no admin, no setup, no nonsense. your dashboard is live in under two minutes.

studex.

today view

- 01 open studex. see exactly what you have today -- classes, timings, rooms. no scrolling, no WhatsApp, no calling a friend. **done in two seconds.**

subject folders

- 02 dump all your files, or let AI organize them into clean subject-wise folders. **exam week sorted in seconds.** never dig through WhatsApp again.

bunk tracker

- 03 mark classes attended or skipped daily. studex tells you exactly where you stand -- **how many you can bunk before 75% breach.** mathematically. no anxiety.

from signup to your dashboard. under two minutes.

self-serve. no admin, no IT team, no college
approval needed.

STEP 01

sign up with any email

no student email required. just sign up. AI chat guides you through basic profile setup conversationally — no boring forms.

chat onboarding

STEP 02

upload your timetable

photo, screenshot, or PDF of your timetable. anything works. studex sends it to AI with a structured extraction prompt in the background.

image / pdf → claude

STEP 03

AI extracts everything

claude pulls subjects, timings, days, classrooms. if it finds shorthand it can't resolve, it asks you. intelligent, not dumb OCR.

subjects · times · rooms · days

STEP 04

confirm & go live

studex presents what it found. you confirm. your full semester is now structured — total classes per subject, per week, calculated automatically.

confirm → dashboard live

STEP 05

daily use starts

mark attendance. dump files. ask the AI anything — schedule, materials, bunk predictions. studex gets smarter about your semester over time.

daily opens · AI mode · files

AI is not a feature. it's the backbone.

every core flow in studex has claude underneath it. this is not an AI wrapper on a spreadsheet.

- **timetable extraction**
claude reads the uploaded image or PDF, extracts all structured data, asks follow-up questions for shorthand, and confirms before writing to the database.
- **conversational onboarding**
profile setup happens through a chat interface — no forms. claude guides the student through what it needs and why.
- **attendance intelligence**
bunk predictions, semester-end projections, "can I skip tomorrow" — all calculated by claude with your actual attendance data as context.
- **AI mode (ask anything)**
dedicated chat interface — what do I have today, find my Unit 3 notes, am I on track for 75%? claude answers with full context of the student's semester.

PRO FEATURES — PLUGGED-IN PROJECTS

lecture digest

MINDOS

upload a lecture PDF or notes — claude converts it into a focused study card. spaced repetition built in at day 3, 7, and 30. already built and live on Fly.io with 180 videos processed.

material search

RAG PIPELINE

RAG pipeline over all uploaded subject PDFs. student asks "formula for torque" or "what's in unit 4" — claude searches across their own material and returns the answer.

both features are **already built** as standalone projects. plugging into studex pro tier as the AI study layer. both are claude API heavy.

the market is massive. and completely untouched.

T A M

3.52 Cr

UG students in India · AISHE 2022–23

S A M

~1.8 Cr

urban, smartphone-enabled, WhatsApp-dependent students

S O M · Y R 1–2

1.5–2L

beachhead: top 6 high-enrollment states, CR-driven

all of the \$7.5B Indian EdTech market went upstream — test prep, upskilling, B2B LMS. zero dollars went to the daily student experience layer. that's the gap.

MARKET SIGNALS — WHY NOW

97.6%

of urban 15–29 year olds who own a phone use a smartphone

40%

of Indian digital users already maintain 3–4 active subscriptions simultaneously. the "students won't pay" argument is dead.

\$10.4B

Indian EdTech market projected by 2025 at 39% CAGR. none of it serves daily student utility.

5–6h

average daily screen time for Indian college students. the phone is already in their hand.

free for students. ₹250/month for peace of mind.

FREE — FOREVER

₹0 / month

- today view — daily schedule
- subject folders
- basic attendance tracker

STUDEX PRO

₹250 / month · ~\$3

- bunk predictor — smart 75% calculations
- AI material search across all PDFs
- lecture digests with spaced repetition
- deadline alerts + submission reminders

WHY ₹250 WORKS — BENCHMARKS

PhysicsWallah online ARPU

₹3,682 annual = ₹306/month. Studex at ₹250 is inside an already-proven psychological threshold for Indian students.

₹306

PW benchmark

freemium conversion rate

Indian EdTech average. 2–3% of users convert to paid. At 1L free users, that's 2,000–3,000 Pro subscribers.

2–3%

ramen profitability milestone

1,000 Pro users @ ₹250 = ₹2.5L MRR. that's milestone 1. not a big raise. just alive and learning.

₹2.5L

MRR target

PHASE 2 — INSTITUTIONAL

₹100–500/student/year · B2B2C

colleges pay to lift student satisfaction and NIRF scores. lead gen: ₹500–2,000 per lead to upskilling platforms.

growth through one relationship at a time. zero CAC.

no paid ads. no big launch. no cold outreach.
the product spreads because it solves a daily
problem.

PHASE 0 10 users. personal onboarding. sit with each user. watch them use it. fix same day. 10 named people who confirmed the problem and said yes.	PHASE 1 CR-first. beachhead college. one CR = 50–80 students pulled through one relationship. approach CRs personally. one section at a time. starting at Ramaiah.	PHASE 2 section → college → next college. same playbook. one section cracks, word spreads to next. one college cracks, playbook copies to next city. no new strategy needed.	THE METRIC daily opens. that's it. not installs. not signups. if students open studex every morning instead of WhatsApp, the product is working. kill signal: fewer than 5 of 10 opening daily after 4 weeks.
10 confirmed early users · named	50–80 students per CR relationship	₹0 CAC target · organic only	daily opens = the only number that matters

we didn't build this in a vacuum.

50+ students surveyed across colleges. majority confirmed: yes, real problem. yes, they'd use this daily.

the #1 thing we heard: students had **no idea how many classes they'd attended** this semester. not even a rough number.

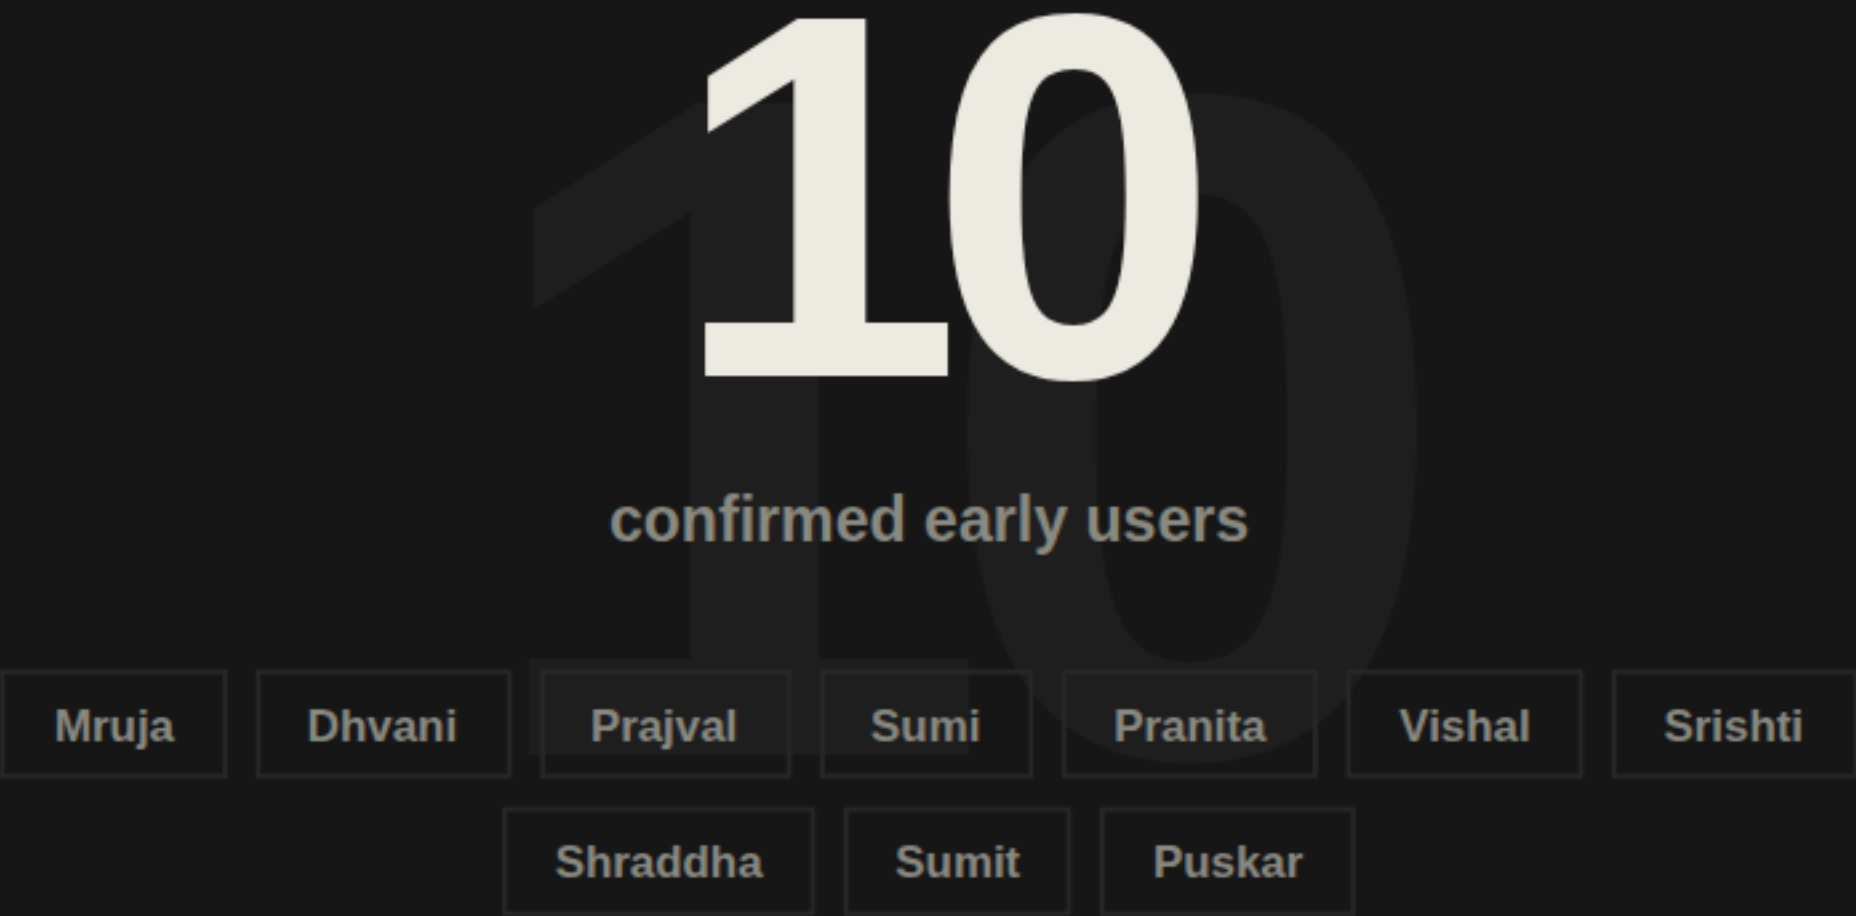

everyone mentioned the college portal exists. **nobody uses it.** too slow, outdated, broken on mobile.

10 named early users confirmed. personal onboarding starts at launch — sit with each one, watch them use it, fix same day.

v1 of this app was **built, shelved, and revived** with more conviction. the problem hasn't changed. the execution plan has.

HONEST STAGE REPRESENTATION

pre-launch. product on paper. MVP build estimated at ~1 week with AI-assisted tools. no fake traction, no inflated team size.

small. honest. building.

FOUNDER

Om Mishra

CS student at Ramaiah University. recognised the problem firsthand, built and shelved v1, reviving with more technical depth now. vibe codes every day — capsule.ohm.quest shipped last week, Refresh chrome extension, 15+ projects shipped. Udyam registered. applying to a16z Speedrun, Z Fellows, Eigenprize.

technical co-founder seat is open.

this is the single most critical unlock. MVP is estimated at ~1 week with AI tools. but a committed technical co-founder changes the build speed entirely.

the college portal indian students actually open. 3.52 crore students. zero tools built for them. until now.

Claude API Credits

studex is a claude-heavy build. timetable extraction, conversational onboarding, attendance intelligence, AI material search — all of it runs on claude. this is not an AI wrapper. claude is the product.

everything else is bootstrapped

all other tools and subscriptions — hosting, design tools, dev stack — currently self-funded. ~\$150/year out of pocket as a student. that stays.

WHY API CREDITS SPECIFICALLY

the MVP cannot be validated without real Claude API calls.

timetable parsing requires multimodal vision calls. onboarding chat requires multi-turn context. attendance predictions require function calling. none of this works on a free tier. credits = ability to actually test with real users.

THE NEXT UNLOCK

WhatsApp agent.

it connects to your class groups -- and then an agent just reads everything. every message, every file, every link someone dropped at 2am. claudes decides what's relevant, what needs saving, what needs a reminder.

files go straight into subject folders. exam dates land in your calendar. deadlines get flagged. announcements get noted.

the goal is simple -- you never need to open WhatsApp for academics again.
studex.

every morning you get a digest. what happened in the group while you were living your life.

here's the actual reason i want this -- i don't want to open WhatsApp for college stuff anymore. i don't want to read the drama, i don't want to participate in it, but i also don't want to show up the next day completely clueless.

so studex just handles it. gives me the summary. i get the signal, none of the noise.

CLASS DRAMA SUMMARY

yes, there's a feature that summarises the class group drama so you know what's going on without having lived through it. yes, it's real. lol.

and then there's the other stuff i keep thinking about.

ATTENDANCE PREDICTION a nudge, not a notification studex already knows your pattern. knows it's a monday, knows you've skipped this class three times, knows you're sitting at 77%. it just tells you in the morning: you should probably go today.	EXAM CRUNCH MODE UI that knows when exams are coming two weeks before exams studex figures it out before you do. flips into a different mode. surfaces every PDF you never opened, generates summaries from your own notes, builds a revision plan from where your actual gaps are.	CR TOOLS flip side of the product CRs are how studex spreads anyway. so give them something too -- their own dashboard to share files and announcements. routes directly to every student's studex. WhatsApp completely out of the picture on both ends.	PEER NOTES batch knowledge network you upload your handwritten notes. claude cleans and structures them. they become searchable by the whole batch. good notes rise. everyone benefits.	"WILL I PASS" honest probability per subject attendance plus whatever grades you've entered plus your exam schedule equals a real number per subject. uncomfortable. accurate. i'd open this every day and i know it.
